# Outline

1. Global Strategy for TB Research
2. ERI Network and European TB Research Agenda
3. SORT-TB (about 50 studies)
4. IR 4 DTB
5. Flagship multi-countries research: mSTR, MDR-TB-HCV, MDR-TPT, CAT-TB, VST-TB
6. Small grants stream at TDR (2 series)
7. ERI-TB virtual workspace

What is our plan

# GLOBAL STRATEGY FOR TB RESEARCH

# Development of a Global Strategy for TB Research

71<sup>st</sup> World Health Assembly:

- to develop a **global strategy for tuberculosis research** and innovation, taking into consideration both ongoing and new efforts, and to make further progress in enhancing **cooperation and coordination** in respect of tuberculosis research and development, considering where possible drawing on relevant existing research networks and global initiatives;

# A strategy that advances goals and targets of the End TB strategy and the SDGs

## Main goal:

The aim of this strategy is to provide, for all Member States, a framework of interventions to remove barriers in TB research and innovation process to help achieve the goals and targets of the **End TB Strategy**

## Strategy goals (short, medium and long term)

Create an enabling environment for TB innovation

Increase financial investments in TB research and innovation

Ensure equitable access to the benefits of research

Promote and improve approaches to data sharing

Introduce new tools: a vaccine, new drugs & treatment regimens for treatment of active TB disease and latent TB infection, and a point-of care Test by 2025

Optimize use of current & new tools emerging from pipeline, pursue universal health coverage and social Protection

No TB affected families facing catastrophic cost ...95% reduction in TB deaths... 90% reduction in TB incidence rate

**SDG 3 “Ensure healthy lives and promote wellbeing for all at all ages”** SDG 3.B Support the research and development of vaccines and medicines for the communicable and non-communicable diseases that primarily affect developing countries, provide access to affordable essential medicines and vaccines, in accordance with the Doha Declaration on the TRIPS Agreement and Public Health, which affirms the right of developing countries to use to the full the provisions in the Agreement on Trade-Related Aspects of Intellectual Property Rights regarding flexibilities to protect public health, and, in particular, provide access to medicines for all.

# What to research

The screenshot shows the WHO website with a navigation menu and several resource cards. A red circle highlights the 'Knowledge Sharing' section.

Training courses dedicated to several aspects of Tuberculosis are available in multiple languages on the Open WHO platform. An End TB channel has been established to facilitate their retrieval.

The screenshot shows the Russian version of the WHO TB Knowledge Sharing Platform website. It features a header in Russian and a main content area with three highlighted resource cards.

## Платформа ВОЗ по обмену знаниями о ТБ

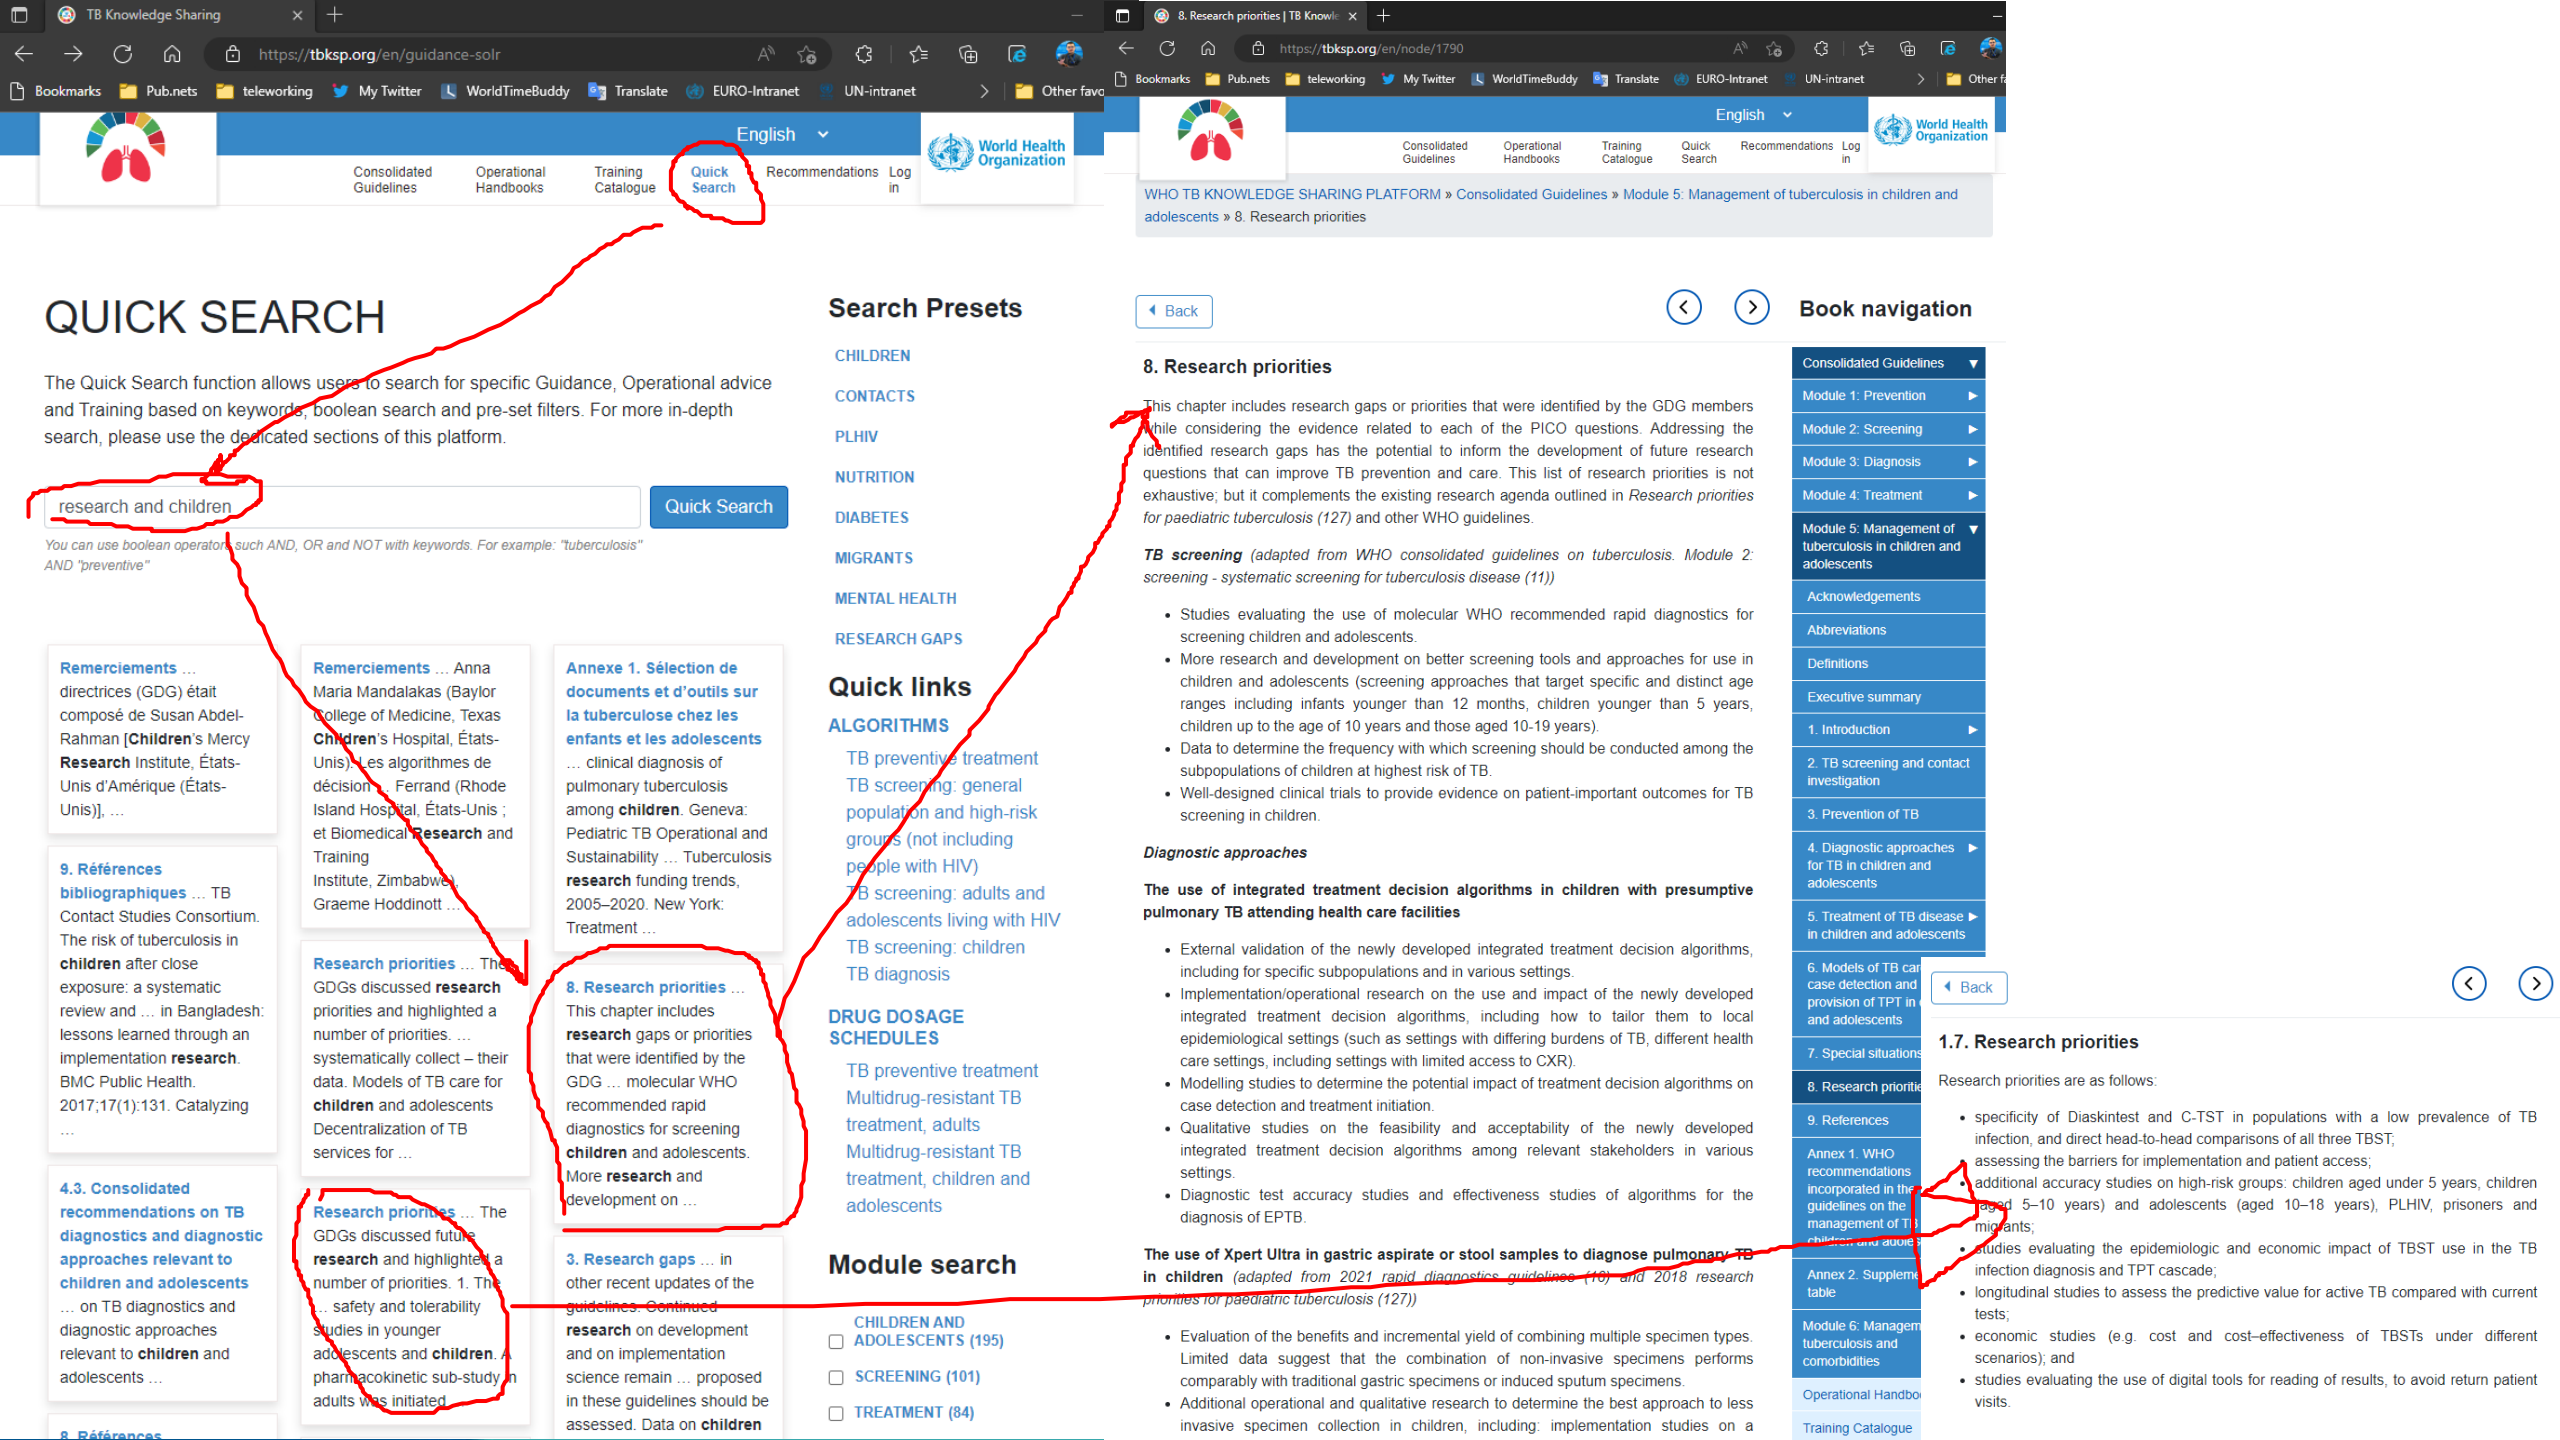

Доступ к модульному руководству ВОЗ по туберкулезу с соответствующими пособиями и учебными материалами.

- Сводное руководство**  
Руководства ВОЗ содержат последние научно обоснованные рекомендации по профилактике и лечению ТБ, призванные помочь странам в достижении Целей в области устойчивого развития (ЦУР) и задач стратегии по ликвидации ТБ.  
Узнать больше →
- Прикладные пособия**  
Прикладные пособия ВОЗ по туберкулезу предоставляют пользователям практические рекомендации с подробным описанием шагов, необходимых для надлежащей реализации соответствующего руководства ВОЗ.  
Узнать больше →
- Учебный каталог**  
Учебный каталог ВОЗ по туберкулезу состоит из онлайн-курсов электронного обучения и других учебных материалов, помогающих пользователям применять соответствующее руководство ВОЗ.  
Узнать больше →

### О нас

Глобальная программа ВОЗ по туберкулезу стремится к достижению цели - мира, свободного от туберкулеза, с нулевым уровнем смертностью, заболеваемости и страданий, вызванными этим заболеванием. Миссия команды заключается в том, чтобы возглавить и направить глобальные усилия по прекращению эпидемии ТБ путем обеспечения всеобщего доступа к профилактике и лечению, ориентированным на потребности человека, многосекторальных действий и инноваций. В рамках своих основных функций Глобальная программа по туберкулезу разрабатывает варианты стратегии, нормы и стандарты по профилактике и лечению ТБ и содействует их реализации.

## 8. Research priorities

This chapter includes research gaps or priorities that were identified by the GDG members while considering the evidence related to each of the PICO questions. Addressing the identified research gaps has the potential to inform the development of future research questions that can improve TB prevention and care. This list of research priorities is not exhaustive, but it complements the existing research agenda outlined in *Research priorities for paediatric tuberculosis (127)* and other WHO guidelines.

**TB screening** (adapted from *WHO consolidated guidelines on tuberculosis. Module 2: screening - systematic screening for tuberculosis disease (11)*)

- Studies evaluating the use of molecular WHO recommended rapid diagnostics for screening children and adolescents.
- More research and development on better screening tools and approaches for use in children and adolescents (screening approaches that target specific and distinct age ranges including infants younger than 12 months, children younger than 5 years, children up to the age of 10 years and those aged 10–19 years).
- Data to determine the frequency with which screening should be conducted among the subpopulations of children at highest risk of TB.
- Well-designed clinical trials to provide evidence on patient-important outcomes for TB screening in children.

### Diagnostic approaches

#### The use of integrated treatment decision algorithms in children with presumptive pulmonary TB attending health care facilities

- External validation of the newly developed integrated treatment decision algorithms, including for specific subpopulations and in various settings.
- Implementation/operational research on the use and impact of the newly developed integrated treatment decision algorithms, including how to tailor them to local epidemiological settings (such as settings with differing burdens of TB, different health care settings, including settings with limited access to CXR).
- Modelling studies to determine the potential impact of treatment decision algorithms on case detection and treatment initiation.
- Qualitative studies on the feasibility and acceptability of the newly developed integrated treatment decision algorithms among relevant stakeholders in various settings.
- Diagnostic test accuracy studies and effectiveness studies of algorithms for the diagnosis of EPTB.

#### The use of Xpert Ultra in gastric aspirate or stool samples to diagnose pulmonary TB in children

(adapted from *2021 rapid diagnostics guidelines (16)* and *2018 research priorities for paediatric tuberculosis (127)*)

- Evaluation of the benefits and incremental yield of combining multiple specimen types. Limited data suggest that the combination of non-invasive specimens performs comparably with traditional gastric specimens or induced sputum specimens.
- Additional operational and qualitative research to determine the best approach to less invasive specimen collection in children, including: implementation studies on a

## 1.7. Research priorities

Research priorities are as follows:

- specificity of Diaskintest and C-TST in populations with a low prevalence of TB infection, and direct head-to-head comparisons of all three TBST; assessing the barriers for implementation and patient access;
- additional accuracy studies on high-risk groups: children aged under 5 years, children aged 5–10 years) and adolescents (aged 10–18 years), PLHIV, prisoners and migrants;
- studies evaluating the epidemiologic and economic impact of TBST use in the TB infection diagnosis and TPT cascade;
- longitudinal studies to assess the predictive value for active TB compared with current tests;
- economic studies (e.g. cost and cost-effectiveness of TBSTs under different scenarios); and
- studies evaluating the use of digital tools for reading of results, to avoid return patient visits.

# Bridging the gap: key evidence needed to strengthen global policies to end TB

## *The way forward*

Obstacles to the development and uptake of safer, effective, affordable, people-centred tools for screening, preventing, diagnosing and treating TB are considerable, but the greatest challenge remains inadequate funding.<sup>22,23</sup> The Global Strategy for TB research and innovation<sup>24</sup> also underscores that collaboration, data sharing and equitable use of the benefits of research are critical for bridging the research to policy and practice gap. During the 2023 United Nations high-level meeting on TB, Member States have the opportunity to boost efforts to get the world back on track to end TB, including through increased investment in research and innovation.

Преодоление разрыва: ключевые фактические данные, необходимые для укрепления глобальной политики по ликвидации туберкулеза

**Препятствия** на пути разработки и внедрения более безопасных, эффективных, доступных, ориентированных на нужды людей инструментов для скрининга, профилактики, диагностики и лечения туберкулеза значительны, но самой большой проблемой **остается недостаточное финансирование**. В Глобальной стратегии исследований и инноваций в области туберкулеза также подчеркивается, что сотрудничество, обмен данными и справедливое использование преимуществ исследований имеют решающее значение для преодоления пробелов в политике и практике.

*В ходе совещания высокого уровня Организации Объединенных Наций по туберкулезу в 2023 году государства-члены имеют возможность активизировать усилия по возвращению мира на путь ликвидации туберкулеза, в том числе путем увеличения инвестиций в научные исследования и инновации.*

# HIGH PRIORITY RESEARCH QUESTIONS BY BOTH EUROPEAN HIGH AND LOW BURDEN COUNTRIES

## Theme 1 Epidemiological Research

- |   |   |
|---|---|
| 1. Burden of disease, including latent TB infection | <ol style="list-style-type: none"><li>1. "What are the trends of drug-resistant TB among the countries in the Region with specific reference to resistance to the new (bedaquiline, delamanid) and repurposed TB drugs (including clofazimine, the fluoroquinolones, and linezolid)?"</li><li>2. "Which are the most cost-effective TB case-finding screening methods among high risk populations?"</li></ol> |
| 2. Dynamics and drivers of disease transmission     | <ol style="list-style-type: none"><li>3. "Which are the most cost-effective interventions to reduce the spread of drug-resistant TB in the Region?"</li><li>4. "What are the social and biological drivers of drug-resistant TB in the Region?"</li></ol>   |

# HIGH PRIORITY RESEARCH QUESTIONS BY BOTH EUROPEAN HIGH AND LOW BURDEN COUNTRIES

Theme 2 Innovation & Fundamental Research	
3. Research in basic sciences	<p>5. "Which biomarkers are useful to determine the risk of progression from latent TB infection to active disease and to distinguish relapse from reinfection?"</p> <p>6. What are the genetic mutations associated with resistance to new and repurposed medicines?"</p> <p>7. "What are the candidate molecular targets for anti-TB drugs?"</p>
4. New diagnostic tools	<p>8. "What is the evidence that rapid molecular diagnostic techniques for the initial diagnosis of TB and resistant forms of TB (such as Xpert® and Whole Genome Sequencing) improve the diagnosis and treatment outcome, especially among children and people living with HIV?"</p> <p>9. "How effective and cost-effective are the new diagnostic platforms (including most recent molecular drug sensitivity tests and Whole Genome Sequencing platforms)?"</p>
5. New drugs and new regimens	<p>10. "What are the observed efficacy, safety and tolerability of new and repurposed medicines (especially among children, adolescents, people living with HIV and the elderly)? Are there any interactions with antiretroviral (ARV) drugs?"</p> <p>11. "What are the optimal doses of new and repurposed medicines in children?"</p> <p>12. "What are the most effective and patient- friendly short-term regimens for MDR/ extensively drug-resistant (XDR)- TB (taking into account the pill burden, use of injectable drugs and duration of treatment) in the Region?"</p>

# HIGH PRIORITY RESEARCH QUESTIONS BY BOTH EUROPEAN HIGH AND LOW BURDEN COUNTRIES

## Theme 3 Operational Research

6. Case detection and screening	<p>13. "What is average time to TB diagnosis among the various risk groups and what are reasons for diagnostic delay?"</p> <p>14. "What are the most effective approaches to the management of close contacts of MDR and XDR-TB index patients?"</p>
7. Access to Rx and compliance	<p>14. "What are the main reasons for patients to discontinue treatment in the Region?"</p>
8. Optimising treatment regimes	<p>15. "What is the optimal preventive regimen for tolerability, efficacy, safety and compliance for close contacts of isoniazid resistant, MDR and XDR-TB index patients?"</p> <p>16. "What are the extent and impact of the short course MDR- TB regimen in National TB programmes in the Region?"</p>
9. Collaboration with HIV programs	<p>17. "What is the optimal screening algorithm for active TB and latent TB infection among people living with HIV"</p> <p>18. "Integrating TB-HIV care: What are the best models for delivering TB-HIV treatment and monitoring?"</p>
10. Infection control	<p>19. "For how long do patients with drug-sensitive and drug-resistant TB remain infectious after starting treatment?"</p>

How we do it

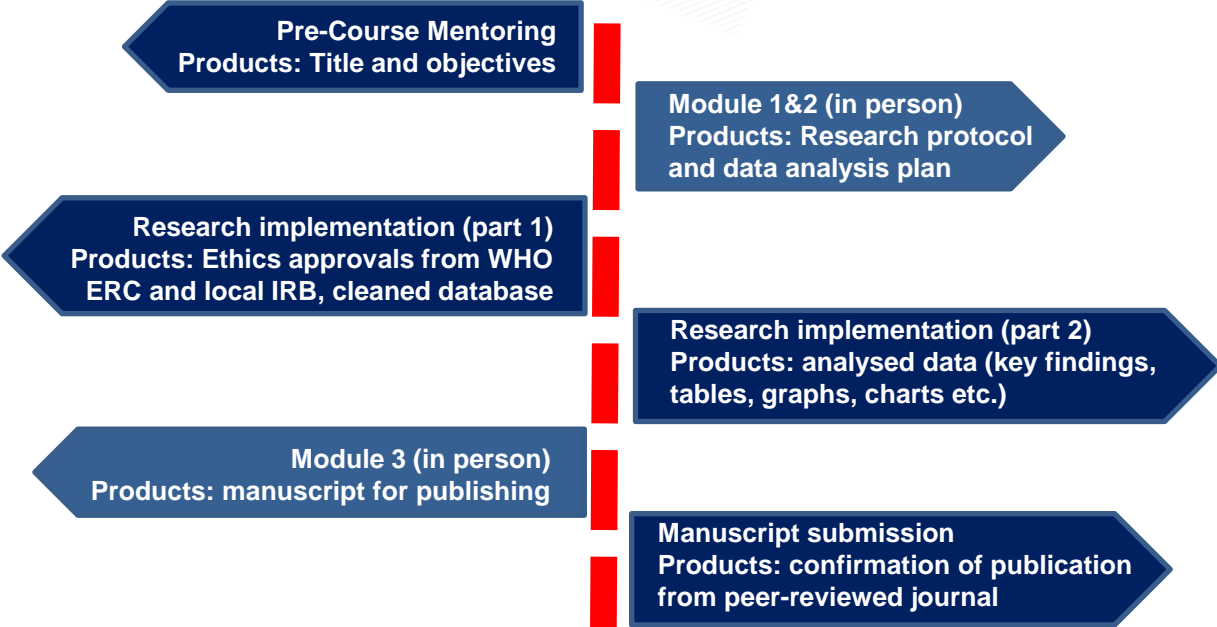

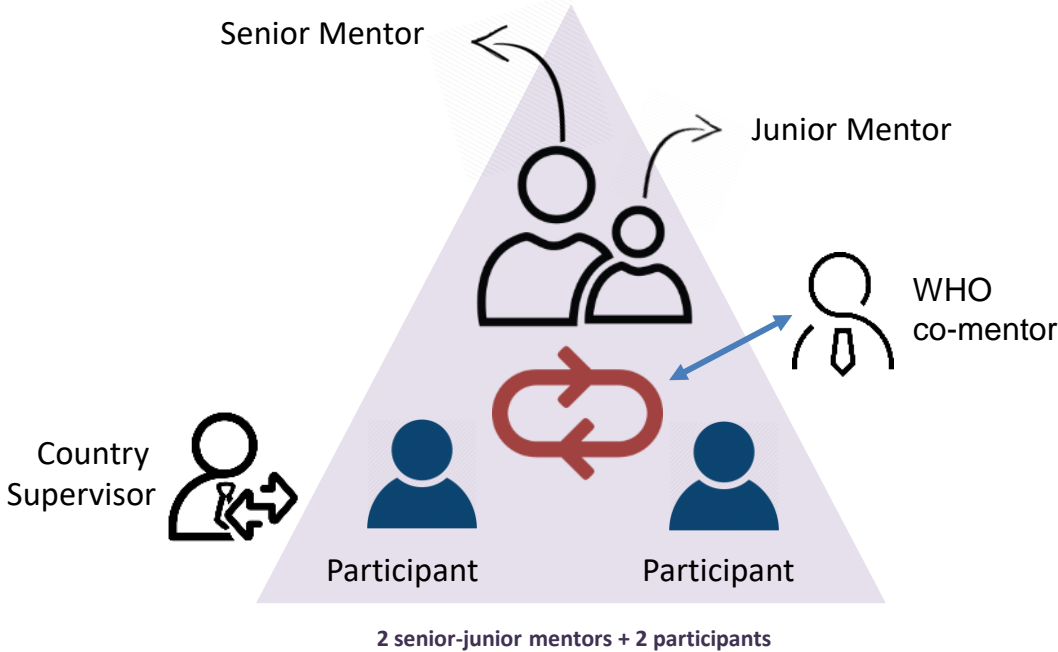

# SORT-TB

# Mentorship Model and Study Process

12 mentors + 12 participants

**Modus Operandi**

- Hands-on in modules
- Progress tracking through milestones
- Continuous support from mentors
- Mentors are co-authors
- SORT-IT faculty at ERI-TB
- Linkage with NTP through supervisors

# Eliminating TB research gaps

Implementing research and transforming it into evidence for improvement of programmatic management of TB

Structured Operational Research Training of ERI-TB (SORT-TB) resulted in 12 publication in a peer-reviewed journal

<https://apps.who.int/iris/handle/10665/326578>

How we do it

# IR 4 DTB

# Implementation Research toolkit for digital technologies and TB (IR4DTB)

Digital toolkit developed by TDR and GTB to guide NTPs to develop and conduct of IR projects related to digital technologies under programmatic settings

## Aims:

- Provide guidance to countries on how to develop an IR study for use of digital innovations within TB programmes
- Support strengthening of evidence based regarding optimal implementation of digital innovations for TB

## Output:

- Comprehensive IR study proposal to support fundraising efforts

# RESEARCH FLAGSHIP STREAMS

# Implementation: Research flagship streams

1. Stream: mSTR-DR-TB: implemented
2. Stream: HCV/DR-TB coinfection: implementation ongoing
3. Stream: PASS to End TB:
  - PTOR-DR-TB: (protocol developed)
  - PASS-barriers (Georgia and Moldova)
4. Stream: IR4TDB: implementation ongoing
5. Stream: epidemiological research
  - DRS 3.0 @ Uzbekistan ([link](#))
  - Epimodeling @ Ukraine for the NSP: scenario calibration
  - Epimodeling @ Europe = the impact of the war at regional level: model development

## The European Tuberculosis Research Initiative (ERI-TB)

The goal of ending the global tuberculosis (TB) epidemic by 2035 was set by the WHO End TB Strategy and endorsed by the World Health Assembly in May 2014. To achieve this goal, the development and implementation of innovative tools (such as new vaccine(s), diagnostics, medicines, preventive and treatment regimens, and innovative service deliveries) is essential. Effective and timely development and implementation of the new tools should be supported by intensified efforts across the continuum of basic science to applied research and development and operational research.

WHO

This important task is included as the third pillar in the Global End TB Strategy and the Tuberculosis Action Plan for the WHO European Region 2016–2020.

The establishment of the European Tuberculosis Research Initiative (ERI-TB) is one of the key milestones of the TB Action Plan for the WHO European Region 2016–2020 and its accompanying resolution, which were endorsed by the 65th session of the Regional Committee of the WHO Regional Office for Europe.

The screenshot shows a Microsoft Teams chat window. The channel is named "SORT-TB2=2019-20" and has 12 guests. The chat history includes several messages:

- A message from HOVHANNESVAN, Araksya (14-Jul-20 12:14 PM) asking "Yulia, did you finish with Mari's study table?".
- A reply from dumchev (dumchev@uihp.org.ua) (Guest) (15-Jul-20 8:07 PM) stating "Liit G tables are uploaded as well. They may need some re-labeling and footnotes." with a thumbs up icon.
- A message from dumchev (dumchev@uihp.org.ua) (Guest) (14-Jul-20 4:36 PM) stating "I've uploaded re-formatted tables for Liit K; for Liit G will follow tomorrow".
- A message from KOROTYCH, Oleksandr (16-Jul-20 12:16 PM) stating "Hi Kostya, thanks. I have updated Liit K tables in the file. As Liit G manuscript was already send for review of Alberto and GB, I will updated it with your changes once it is returned from review".
- A message from KOROTYCH, Oleksandr (30-Oct-20 3:12 PM) addressed to DADU, Andrei, stating "Awaiting your review of the editorial, so I can take it further." and including a file named "Monaldi TechnicalEditorial-OK.docx".
- A reply from DADU, Andrei (30-Oct-20 3:26 PM) stating "dear Oleksandr this is received, thanks, let me work on it, will revert by Monday, many thanks".
